SUMMARY

Software Engineer and Co-founder & CTO with 1.5+ years of professional experience building production web and mobile applications, mainly with Next.js, React, TypeScript and NestJS. Experienced across the stack, from frontend performance and shared design systems to database design, payments, cloud infrastructure and AI features. Quick to pick up whatever stack a project needs, from Vue.js and .NET to Swift and Supabase.

EXPERIENCE

OneMore Apr 2026 - Present

Co-founder & CTO

A marketplace connecting learners, tutors and SMEs: learners train as data analysts and deliver real projects for SME clients.

- Designed and built the platform with Next.js 16, React 19, TypeScript and Supabase, and design PostgreSQL database.
- Set up a server-only data access model: the browser never talks to the database directly, and every request goes through API routes.
- Built separate workspaces for students, tutors, businesses and admins, with admin access split into Super Admin, Operations, Finance, QA and Support.
- Integrated Stripe payments (card and PromptPay) with promo codes, escrow status for business projects, and tutor earnings and payouts.
- Built the full SME project flow: brief submission, tutor proposals, milestone tracking, and deliverable review and approval.
- Led a full marketplace-style redesign with Thai as the primary language, and improved course page performance.

PharmaCloud Jul 2026 - Present

Software & Integration Engineer (Contract)

- Building an AI pharmacy-management platform for small and medium hospitals in a 3-person team, currently in pilot at a hospital.
- Own the hospital information system integration (read-only PostgreSQL, HOSos), keeping patient data on site under PDPA.
- Own the clinical decision-support checks (Pharma Sure) and role-based.
- Built the usability prototype in Next.js 16, React 19 and Tailwind v4 (prescription queue, screening with override-with-reason, barcode-driven verification, forecasting and BI dashboards), covered by a Playwright suite.

Top Gun Co., Ltd. Jan 2025 - Present

Software Engineer

- Built web and mobile features in an Nx monorepo with Next.js and React Native/Expo, sharing Zod contracts and view-models across platforms.
- Cut recruiter dashboard LCP from 8.9s to ~0.9s with zero layout shift by moving 11 data-heavy pages to TanStack Query SSR prefetching and hydration.
- Built AI features end to end on web and mobile: AI Career Analysis for job seekers, and a 4-step AI job-posting wizard with streamed generation, salary suggestion and candidate matching.
- Co-founded the shared React UI kit (shadcn/Radix, Tailwind, Storybook), including accessible date pickers and drag-and-drop lists.
- Designed a NestJS article service with Prisma, SEO structured data and Terraform-managed AWS infrastructure to replace an end-of-life WordPress site, migrating 1,476 articles without loss.
- Built and hardened a Puppeteer image generation service for personalized share cards, with job time limits, heartbeat liveness checks and bounded caching.

Playtorium Jun 2024 - Jul 2024

Software Developer (Internship)

- Developed web applications using Vue.js and .NET, and managed CI/CD pipelines with GitLab CI.
- Implemented backend transactions and rollbacks, and optimized data management for performance in an agile team.

Freelance Jan 2023 - Nov 2024

Full-stack Developer

- **AZAI:** Built property management and real estate listing apps with React Native, Expo, TypeScript and TailwindCSS, including real-time chat via Socket.IO.
- **SOpet and others:** Designed UX/UI and built web apps with Next.js, including a bank slip submission and PromptPay QR payment tool, and a chatbot website with context-aware AI responses using LangChain, backed by Elysia (Bun) APIs.

Thailand Post: Journey to Startup Sandbox 2022 Competition Jul 2022 - Oct 2022

Software Developer

- Competed as a Kotlin Software Developer, focusing on exceeding customer expectations.
- Designed and developed a warehouse management application.
- Achieved 1st place in the competition.

SKILLS

Languages & Frameworks: TypeScript, JavaScript, React, Next.js, NestJS, React Native, Expo, Vue.js, TailwindCSS, Swift, SwiftUI, Python, Kotlin

Data & Backend: PostgreSQL, Supabase, Prisma, MongoDB, TanStack Query, Zod, Stripe, Socket.IO, HL7/FHIR

Infrastructure & Tools: AWS, AWS Amplify, Terraform, Nx, Storybook, Vitest, Playwright, Puppeteer, GitHub Actions, GitLab CI, Git, Figma

Languages: Thai (Native), English (Intermediate)

PROJECTS

BROKE *(Side Project)* 2025

- Built an iOS app with Swift, SwiftUI and CoreData that turns Thai bank transfer slips into structured transactions, using a Slip API with a Google Gemini fallback for reliable extraction.
- Added an analytics dashboard with Swift Charts showing category distribution, monthly trends and spending against historical averages.

KhongKhun TTS *(Senior Project)* 2025

- Multilingual Thai-English dubbing system using LLM translation and zero-shot TTS that preserves speaker identity. Built the internal tooling with Next.js and Python: data validators, demo sites, and a model-weight comparison platform.

Massager WebChat *(Computer Networks Final Project)* Mar 2024 - Apr 2024

- Built a real-time chat app with Next.js, MongoDB and Socket.IO, with authentication, chat history, private and group chats, emoji, and typing notifications.

Crafty *(Software Engineering II Project)* Jan 2024 - May 2024

- Built a marketplace for handmade crafts in a team of 6 with Next.js, TailwindCSS and MongoDB, including posts, ratings, reviews and identity verification. Worked as frontend developer and UX/UI designer.

EDUCATION

Chulalongkorn University GPAX 3.73

Bachelor of Computer Engineering (1st Class Honours) Aug 2021 - Jun 2025

Relevant Coursework: Data Structures, Algorithm Design, Computer Networks, Software Engineering, Database Systems, Data Science, Software Architecture, Computer Security, OOP
