Software Engineer with 1.5+ years building production-grade web applications, primarily in the **Next.js** ecosystem but proven across diverse stacks — from **Vue.js** and **Swift** to **AI integrations**. Always willing to adopt new technologies to best serve the project's needs.

EDUCATION

Chulalongkorn University

GPAX 3.73

Bachelor of Computer Engineering (1st Class Honours)

Aug 2021 - Jun 2025

Relevant Coursework: Data Structure, Algorithm Design, Software Engineering, Database System, Data Science, Software Architecture, Computer Security, OOP

SKILLS

Programming: React, JavaScript, TypeScript, Next.js, NestJS, Vue.js, TailwindCSS, React Native, Swift, Python

Others: Git, Jira, Postman, Firebase, MongoDB, PostgreSQL, Socket.IO, Expo

Language: Thai (Native), English (Intermediate)

EXPERIENCE

Top Gun Co., Ltd.

Jan 2025 - Present

Software Engineer

- Leveraged an **Nx** monorepo with **Next.js** to implement an Anti-Corruption Layer with **Zod** and **ViewModel** transformations; established a strict server-state separation strategy using **TanStack Query** while developing internal shared packages for Design Systems and API contracts.
- Achieved instantaneous page loads for data-intensive views by architecting a dual-layer caching strategy and optimized static pages using **Lighthouse** as a primary performance benchmark.
- Developed a **Puppeteer**-based backend service within the same **Nx** monorepo using **NestJS** to offload complex, personalized image generation from the client, optimizing resource utilization for high-quality assets.

Playtorium

Jun 2024 - Jul 2024

Software Developer Intern

- Developed web applications using **Vue.js** and **.NET**, while managing CI/CD pipelines with **GitLab**.
- Implemented backend transactions, rollbacks, and optimized data management for performance in an agile team environment.

Freelance Software Engineer

Jan 2023 - Nov 2024

Full-stack Developer

- Developed mobile applications for property management and real estate listings using **React Native**, **Expo**, **TypeScript**, and **TailwindCSS**; implemented real-time chat via **Socket.IO** and built a web-based financial tool for bank slip submission and PromptPay QR generation using **Next.js**.
- Designed and implemented a chatbot-integrated website using **Next.js** and **LangChain**, focusing on an intuitive UI with context-aware AI responses.

PROJECTS

BROKE app (Side Project)

- Built an iOS app with **Swift** and **SwiftUI** that converts Thai bank transfer slips into structured transactions for automated expense tracking, using a primary Slip API with a **Google Gemini** fallback to improve extraction reliability.
- Developed a minimal analytics dashboard with **Swift Charts** to visualize category distribution, monthly trends, and spending variance against historical averages.

Massager (Course Project)

- Built a real-time full-stack chat application using **Next.js**, **MongoDB**, and **Socket.IO** as a Computer Networks final project; supports authentication, private and group chats, typing notifications, and emoji — deployed end-to-end.
